## CRT-800 Rubber Track

# The performance you need

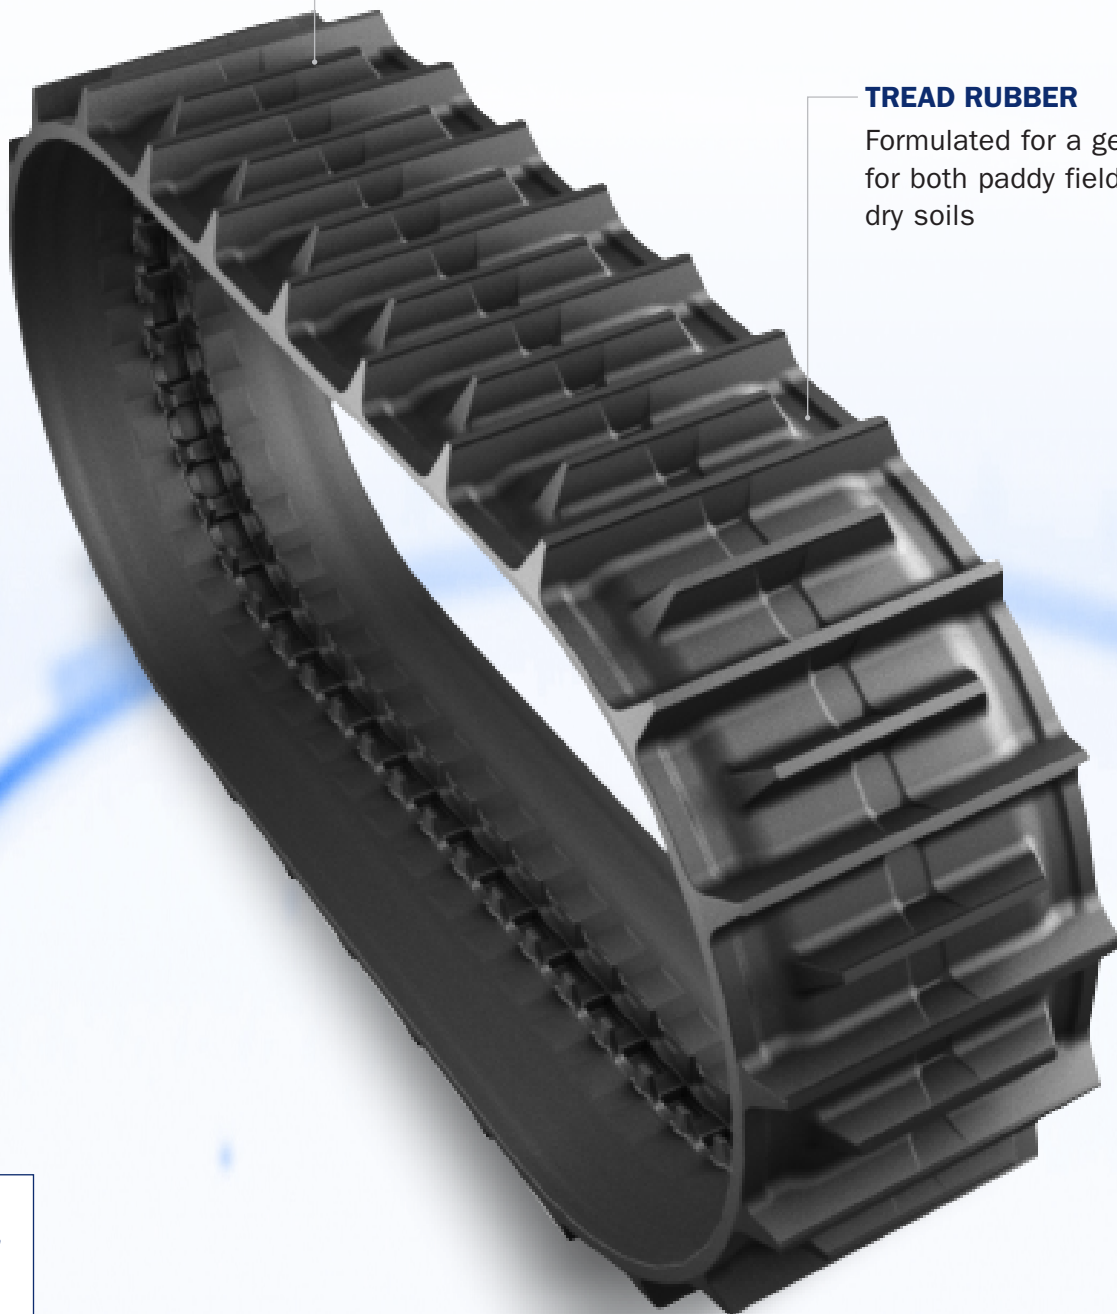

The CRT-800 rubber track is one of the most cost-effective tracks available on the market today. With its traction, design and advanced rubber compound, the CRT-800 outlasts and outperforms other tracks in its class. CRT-800 is ideal for rice harvester machines.

## **TREAD DESIGN**

Enhanced traction and mobility in wet soil

## **TREAD RUBBER**

Formulated for a gentle track for both paddy fields and on dry soils

Printed on  
recycled paper

### Maximum value

High quality materials are used in the production of CRT-800 rubber tracks, resulting in a better cost per hour than other tracks in their class. Our cut-resistant rubber compound is durable and stops moisture from getting into the track.

### High productivity

Downtime causes project delays and lost revenue. The CRT-800 rubber track keeps your equipment moving. The continuous wound cables provide strength and flexibility to the track and its forged metal pieces assure long life.

### Excellent traction

Its state of the art tread has been designed to optimize the balance between traction and mobility in wet terrain. The CRT-800 ensures low ground pressure preserving your soils.

### Long life

This newest product has been designed to fit any machine undercarriage, resulting in better handling, excellent ride quality and longer life. In addition, the tread compound is uniquely formulated to leave a light touch on both dry ground and rice fields alike.
