

Trelleborg tires keeps driving productivity in waste management with its solid tire offering

- **Brawler Soft Ride compound contributes to reduced vibration and increased deflection for a more comfortable ride without compromising tire life**
- **Trelleborg tire experts will be available in Booth 2273 at WasteExpo 2024 to discuss the benefits of the Brawler solid tire line including reduced downtime and best cost per hour.**

Trelleborg Tires, a leading manufacturer of solid tires for the waste and recycling industries, is returning to Las Vegas, for WasteExpo 2024, Nevada following a successful showing at ISRI 2024. Exhibiting in Booth 2273 at the Las Vegas Convention Center May 7-9, 2024, Trelleborg Tires will keep driving its mission to enhance productivity in waste and recycling operations by demonstrating the benefits of its Brawler solid tire line up.

In the waste and recycling industry, operational challenges are amplified by the demanding environments of waste transfer stations and recycling facilities. These conditions require tire solutions that can withstand severe operational stress to minimize downtime caused by tire changes or failures.

“Trelleborg's Brawler solid tires are specifically engineered to address all these challenges. Their solid construction and advanced Soft Ride compound significantly reduce issues such as cuts and chunking, ensuring prolonged durability under harsh conditions.

Additionally, operators benefit from a smoother and more comfortable ride due to the Soft Ride compound and Brawler's unique elliptical apertures, which enhance deflection, further enhancing operational efficiency and safety in waste management applications” commented Brian Bentley, National Account Program Manager Construction at Yokohama TWS North America.

Trelleborg tire experts will be on hand at WasteExpo - Booth 2273 to demonstrate the benefits of the Brawler solid tire line with industry professionals. The Brawler range includes both press-on and mold-on tires for wheel loaders, skid steers, material handlers, excavators, and telehandlers. In addition to its solid tires, Trelleborg will highlight its earthmover pneumatic radial line, the EMR series, and its CRT-800 line of rubber tracks for compact track loaders and mini-excavators.
